MOHOKA SOLUTIONS (PTY) LTD
trading as Kumo

Security Policy

Version 0.1 : internal working document

1. Purpose and Scope

This Security Policy describes the technical and organisational measures applied by Mohoka Solutions (Pty) Ltd, trading as Kumo ("Kumo", "we", "us", or "our"), to protect personal information and other data processed in connection with the Kumo platform (the "Service").

This Policy applies to all systems, infrastructure, and personnel involved in the operation of the Service, and to all third party service providers and Verification Partners engaged by Kumo to the extent they process data on Kumo's behalf.

2. Data Classification

Kumo classifies data processed through the Service into the following categories, each subject to controls proportionate to its sensitivity:

- Restricted data, comprising identity numbers, banking transaction detail, and any data from which a User's financial position can be inferred.
- Confidential data, comprising contact information, account credentials, and internal verification records.
- Internal data, comprising aggregated or de-identified operational data used for product improvement and reporting.

3. Access Control

Access to Restricted and Confidential data is limited to personnel and systems for whom access is necessary to perform their function, applied on the principle of least privilege. Access is granted individually, is logged, and is reviewed periodically. Access is revoked promptly upon a change in role or termination of engagement.

Kumo does not grant any employee, contractor, or system standing access to a User's online banking credentials. Bank account linking is performed exclusively through a Verification Partner, and Kumo's systems interact only with the tokenised or summarised transaction data returned by that Verification Partner, not with raw banking credentials.

Administrative access to production systems requires multi factor authentication.

4. Encryption

Data classified as Restricted or Confidential is encrypted in transit using industry standard transport layer security, and is encrypted at rest using industry standard encryption. Encryption keys are managed separately from the data they protect and access to key material is restricted and logged.

5. Verification Partner and Subprocessor Security

Kumo engages Verification Partners and other subprocessors that are licensed or regulated as appropriate to their function and that maintain their own security certifications and controls. Kumo enters into written agreements with each subprocessor that require the subprocessor to apply security measures no less stringent than those described in this Policy, to notify Kumo promptly of any security incident affecting Kumo data, and to permit reasonable audit or assurance activity.

Kumo maintains a current register of subprocessors and Verification Partners, available on request.

6. Monitoring and Logging

Kumo maintains logging of access to Restricted and Confidential data and of material system events, sufficient to support detection of, and investigation into, unauthorised access or anomalous activity. Logs are retained for a period sufficient to support incident investigation and are protected against unauthorised modification.

7. Fraud and Anomaly Detection

Kumo applies verification checks to payment data before treating a payment as a Rent Payment eligible for Furnishing, including checks on recipient identity, payment pattern, and consistency with the Property Reference provided by the User. These checks are reviewed and updated periodically as new fraud patterns are identified.

8. Incident Response and Breach Notification

Kumo maintains an incident response process for identifying, containing, investigating, and remediating security incidents. Where Kumo becomes aware of a security compromise that has resulted, or is reasonably likely to result, in unauthorised access to or disclosure of personal information, Kumo will notify the Information Regulator and affected data subjects in accordance with the requirements of POPIA, and will notify any affected Bureau or Verification Partner without undue delay.

9. Personnel Security

Personnel with access to Restricted or Confidential data are subject to confidentiality obligations and receive periodic training on data protection and security practices appropriate to their role.

10. Business Continuity

Kumo maintains backup and recovery processes for production data and reviews its business continuity arrangements periodically to support continued operation of the Service and protection of data in the event of a disruption.

11. Review and Updates

This Policy is reviewed periodically and updated as necessary to reflect changes in Kumo's systems, applicable law, or industry practice. Material updates will be communicated to Users and to relevant Bureaus and Verification Partners.

12. Contact

Queries regarding this Policy, or reports of a suspected security incident, may be directed to Mohoka Solutions (Pty) Ltd at the contact details published on the Kumo website.
